

DO YOU...

- Get sudden, strong urges to urinate and are unable to control it?
- Go to the restroom 8 or more times a day?
- Have accidental leakage before you make it to the restroom?
- Have trouble urinating?
- Want to try another treatment after seeing others fail in the past?

You are not alone

Millions of people worldwide suffer from these life-altering symptoms.²

It's time
to stop
coping with
your symptoms

Take the
**first
step**

Ask your doctor if you are a good candidate for Axonics Therapy.

Important Safety Information:

Indications: The Axonics R15 System for urinary control is indicated for the treatment of urinary retention and the symptoms of overactive bladder, including urinary urge incontinence (leakage) and significant symptoms of urgency-frequency, either alone or in combination, in patients who have failed or could not tolerate more conservative treatments.

The Axonics R15 System for bowel control is indicated for the treatment of chronic faecal incontinence. The therapy should only be used in patients who have failed or are not candidates for more conservative treatments.

The Axonics R20 System for urinary control is indicated for the treatment overactive bladder symptoms, including urinary urge incontinence (leakage) and significant symptoms of urgency-frequency, either alone or in combination, in patients who have failed or could not tolerate more conservative treatments.

Results and experiences may vary and are unique to each patient. No promise or guarantee is made about specific results or experiences. For a complete listing of indications, contraindications, warnings and precautions, go to www.axonics.com/isi.

Caution: This device can be sold and used by, or on the order of, a physician only.

For Summary of Safety and Clinical Performance (SSCP), refer to <https://ec.europa.eu/tools/eudamed/#/screen/home>.

Adverse Event Reporting: In case of any serious incident related to the product, please report to Axonics (+1-877-929-6642) as well as the competent authority of your state.

Axonics

Are your **bladder** or
bowel accidents
disrupting you from living a
normal life?

Axonics® Therapy
treats symptoms of
overactive bladder, bowel
(faecal) incontinence and
urinary retention.

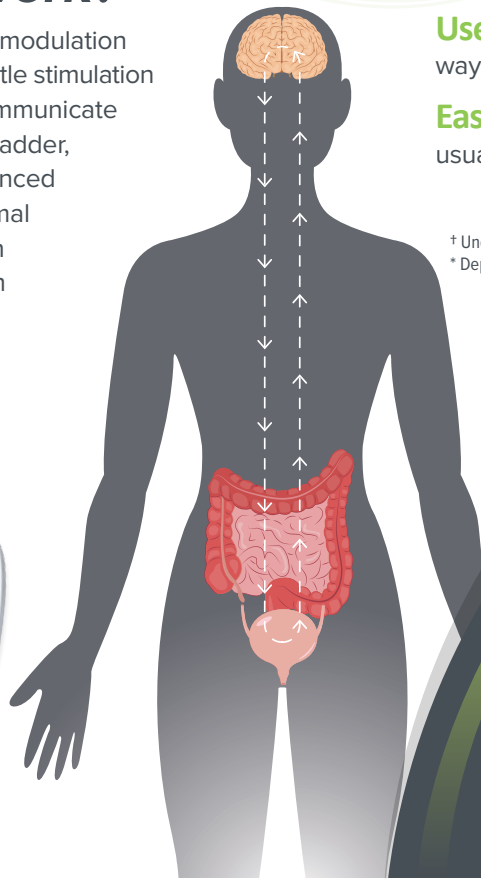

Axonics

Axonics Therapy is an advanced treatment solution for you

Overactive bladder, faecal incontinence and urinary retention may be caused by abnormal communication between the brain and bladder or bowel.

How does Axonics Therapy work?

Axonics Sacral Neuromodulation Therapy provides gentle stimulation to the nerves that communicate between the brain, bladder, and bowel. This advanced therapy restores normal communication which can result in symptom improvement.

The Axonics Advantage

Try it out first: you can wear an external device for just a few days to see if you experience first-hand if this therapy works for you

Small size: safely delivers therapy with a miniaturised implant that is about the same size as a quarter[†]

Full-body MRI: an implant that allows for you to have a full-body MRI[†]

Long-term therapy: designed to deliver therapy for 15-20+ years^{*}

User-friendly: simple tools for a user-friendly way to manage your therapy

Easy charging: wireless charging experience that usually takes less than an hour every 2-10 months^{*}

[†] Under certain conditions

^{*} Depending on device and therapy settings

Clinically Proven

93%

of patients achieved clinically significant improvements^{*1}

94%

of patients were satisfied with their therapy¹

^{*} 50% or greater reduction in symptoms at 2-years

REAL PEOPLE

REAL RESULTS

“ ”

My quality of life is so much better. It's been an absolute life changer for me and my family. I can't imagine life without Axonics.

— Wendy G.

Axonics Patient 6+ Years

Results and experiences may vary and are unique to each patient. No promise or guarantee is made about specific results or experiences.

Safety Information

Risks include change in sensation of stimulation which might be uncomfortable, pain or irritation at the implant site, lead migration, undesirable change in pelvic function, and implant site infection.

Implantation of the Axonics System incurs risk normally associated with surgery. Talk to your doctor about the potential benefits and risks.
