

Qrem Cytokine

with potential regenerative properties

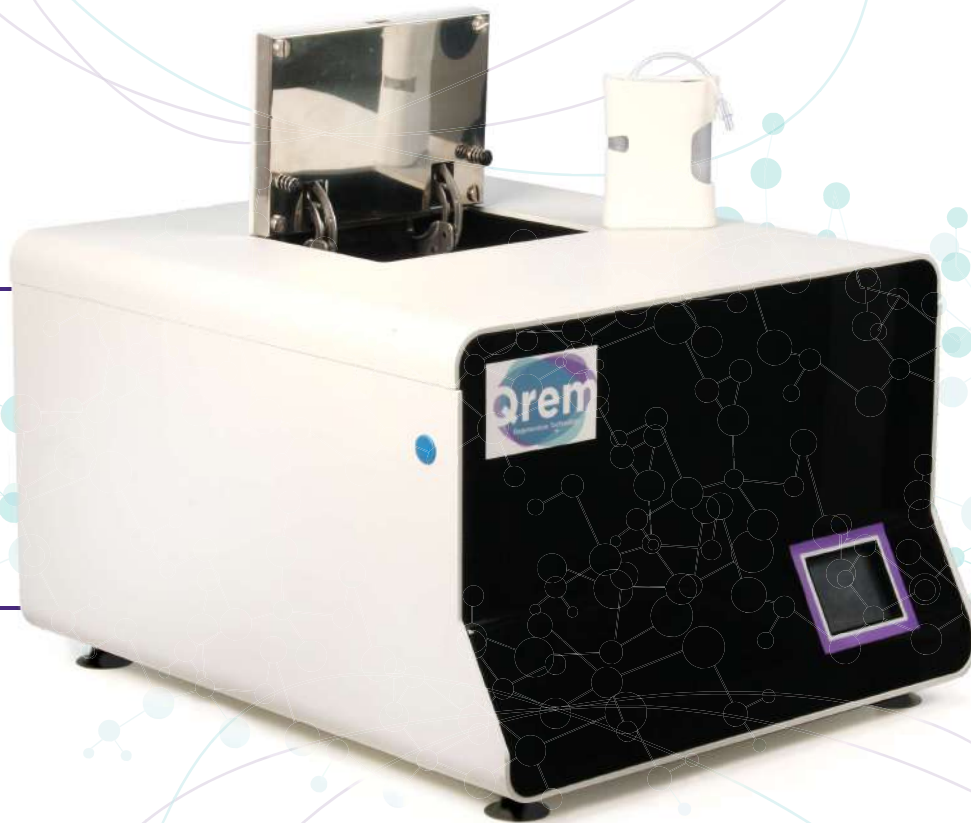

A pioneer technology for autologous cytokines therapy

Qrem Cytokine processes patient's peripheral blood to obtain a cytokine-rich serum to treat musculoskeletal diseases.

An integrated bioengineering system

- All processes in a single device (lab-in-a-box)
- Plug & Play, in the physician's office
- No need for infrastructure nor laboratory staff
- 100% sterile

An autologous cytokines treatment

- Serum with high and balanced cytokine concentrations
- Cytokines are obtained replicating endogenous signaling pathways
- No addition of artificial components
- Acts in the inflammatory and regenerative cascade
- Has demonstrated clinical benefit (improvement in pain and mobility) in a clinical study in knee osteoarthritis
